

Mini Disc Battery Ceramic Heating Coil

GREENWAY Mini Disc Battery Ceramic Heating Coil made by Aluminum Ceramic heater developed based on ceramic lamination technologies, which are mainly used for automotive and various industrial applications such as soldering iron, kerosene & gas equipment, pellet burner and water heating.

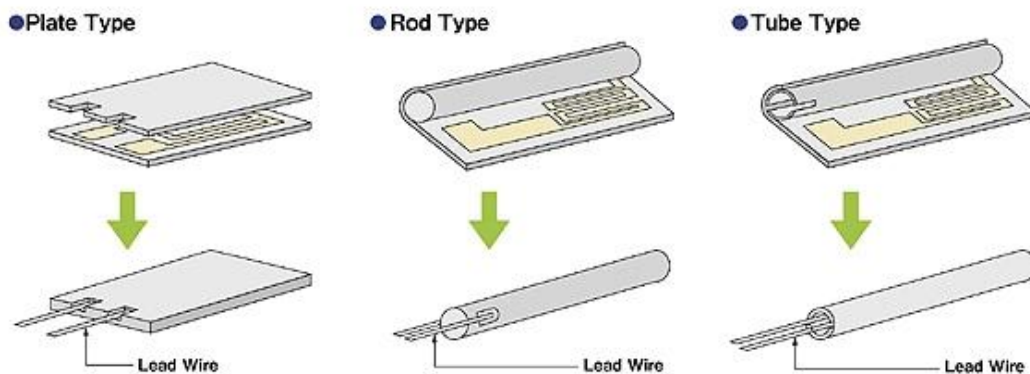

Model: Heater

Mini Disc Battery Ceramic Heating Coil

GREENWAY **Mini Disc Battery Ceramic Heating Coil** made by Aluminum Ceramic heater developed based on ceramic lamination technologies, which are mainly used for automotive and various industrial applications such as soldering iron, kerosene & gas equipment, pellet burner and water heating.

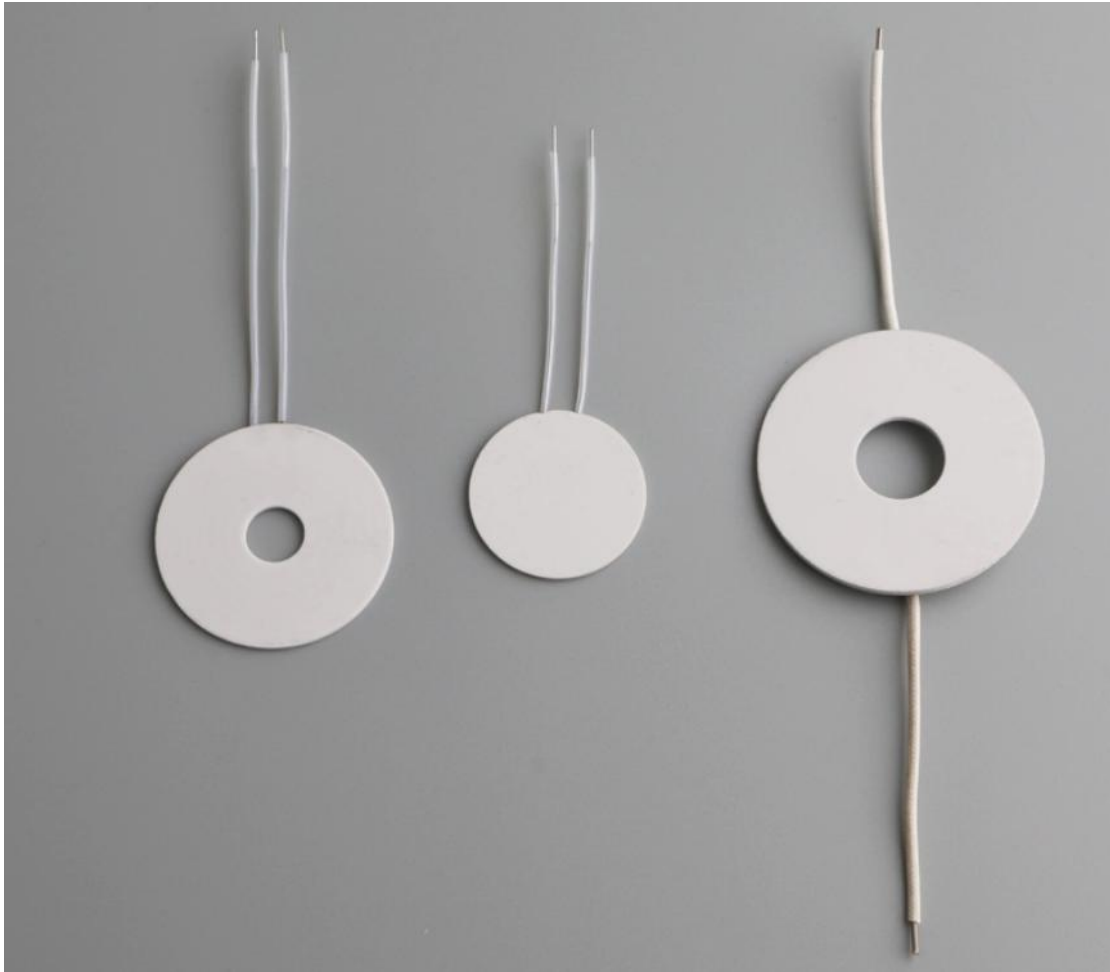

Process of Mini Disc Battery Ceramic Heating Coil

Internal Heating elements are protected from oxidation due to sintering into one-piece ceramic body structure.

Features of Mini Disc Battery Ceramic Heating Coil

Compact / Light-Weight / Energy-Conserving
High watt density, good thermal efficiency
Laying of multiple heating elements per unit is available

Ceramic is the Best Heating Elements for Ecigarette

Ceramic is inert - it is this quality that makes ceramic heating elements a top favorite among vapers. This means that ceramic heating elements, such as ceramic heating chambers found in dry herb vaporizers, won't chemically interact with the herbs during vaporization process. This results in pure, unaltered flavors as opposed to the weird taste that some heating elements infuse into the vapor.

Packing and Delivery

The suitable packing should be taken to avoid the breakage and contamination during the shipment. Fast International Express Delivery such as DHL, TNT, FEDEX, UPS ect.
